

Pediatric Radiotherapy in Denmark

- 50 children/year receive radiotherapy
- Centralized on two sites - Copenhagen, Aarhus
- 2/3 of the children are being send abroad for proton radiotherapy
- 2019 opening of DCPT in Aarhus, national three gantry facility
- Start of pediatric cases probably in spring
- Most pediatric brain tumours / parameningeal RMS are per default proton therapy patients, for other diagnoses we will often perform comparative doseplans. GBM and DIPG will be treated with photons.
- National radiotherapy / toxicity database is planned for photon and proton patients, similar to the “radtox” initiative
